

MORE THAN A CONGRESS: THE INTERFACE BETWEEN SCIENCE AND INDUSTRY.

The World of Photonics Congress is the leading European scientific conference and gathering for the international scientific elite. It is where research comes together with application and becomes an important business factor. For 65% of all trade-fair exhibitors, congress participants are an important target group, and 44% of them also want to address visitors from colleges and universities with their exhibits.

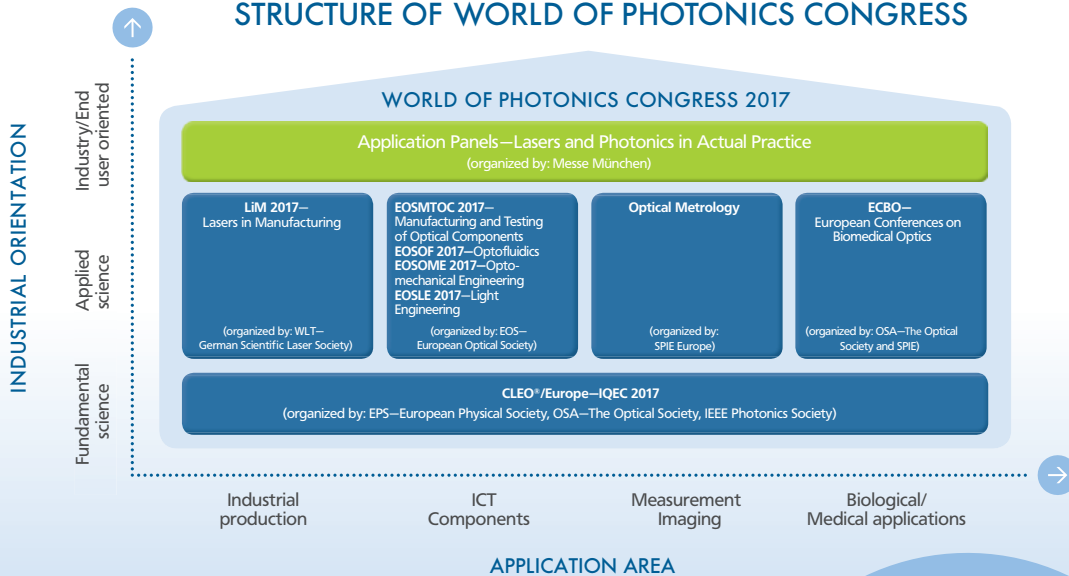

So exhibiting at the fair is worthwhile in two ways because you reach two target groups at the same time at just one event—and you get one free congress ticket and five more tickets at a special price.

→ WORLD OF PHOTONICS CONGRESS IN 2015

- More than 3,900 participants
- Some 2,700 lectures
- 99% positive ratings from visitors

STRUCTURE OF WORLD OF PHOTONICS CONGRESS

Our congress partners:

With eight individual conferences, more than 2,700 presentations and the support of six scientific associations, the World of Photonics Congress addresses all aspects of photonics research.

Ellen Richter-Maierhofer
Congress Manager

The World of Photonics Congress is one of the world's largest and most important scientific congresses in the photonics sector. The combination of the trade fair and the congress is unique: More than any other congress and trade fair of this kind, visitors profit from the perfect combination of basic research, application-oriented research and the presentation of industrial products and processes.

Prof. Dr. Peter Loosen, Steering Committee Chairman of the World of Photonics Congress and Member of the Board of Directors at Fraunhofer Institute for Laser Technology ILT
